Jane,

I'm hoping to submit by end of day today. I'm waiting on a final batch of passive sample results and making one submittal today. So far, I've only seen one detect of TCE in indoor air at a concentration of 0.34 ug/m3.

Hi Robert – Do you have an update on when you will submit the below information through the RR electronic submittal portal? As a reminder, upcoming sample result notifications should be sent to the portal as well. You may choose to email these in addition to submitting them through the portal.

Thanks, Jane

Hi Robert—Thank you for the email. Please submit this notification documentation to the RR electronic submittal portal. Moving forward, all sample result notifications should be presented through the portal and should, at a minimum, include a brief narrative of the sampling activities that occurred to give context to the documentation/results provided.

Best, Jane

Jane,

We're starting to get data in for additional sampling performed to address the commissioning exceedances for the CWC West Block.

First set of data we've received is for the exhaust fans. The data indicates a significant reduction in TCE and PCE concentrations in the exhaust fans which should be representative of the conditions under the building.
